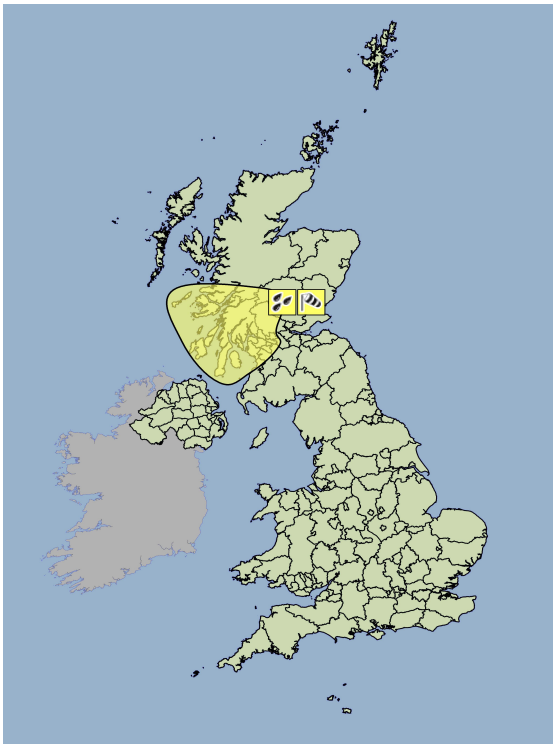
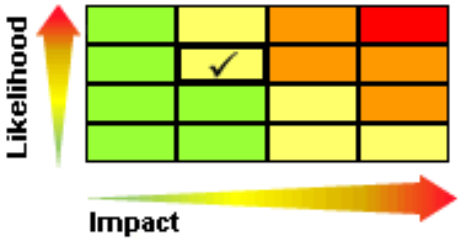
National Severe Weather Warning Service





Chief Forecasters Assessment
A rather vigorous area of low pressure for the time of year, will bring a combination of strong winds and heavy rain to parts of Scotland. Rain, which sets in later on Friday, looks like being less intense but more persistent than was seen on Friday morning, bringing a further 25 to 50 mm by the middle of Saturday but with some upland areas receiving more than 80 mm.

The Met Office have issued a **Yellow Warning** of **Rain and Wind**

Valid from **18:00 on Fri, 17th Jul 2015** until **13:00 on Sat, 18th Jul 2015**

Persistent and sometimes rather heavy rain will develop again across parts of western Scotland on Friday evening, lasting into the first part of Saturday. The rain will be accompanied by strong west or southwesterly winds, with gales especially along some exposed coasts this evening and for a time overnight. Gusts of wind may exceed 55 mph there, but more widely 35 to 45 mph inland.

The public should be aware of possible minor impacts to transport and travel, resulting from either wind or rain, the latter not helped by the fact that the ground is saturated.
